I am a Self-taught Full-Stack developer, passionate about building modern web applications and designing software architectures. For the past two years, I worked assiduously on improving my mastership in the leading web technologies and frameworks. During that time, I developed a blog website for a social organization, a personal portfolio webpage, and multiple other noteworthy projects.

I have faith that my experience in the multimedia industry enhanced my skills to innovate and think outside the box, i.e., will be helpful in software design and development.
